TITLE : FILM FORMING METHOD OF ANTIREFLECTION FILM ON PLASTIC FILM

ABSTRACT : PROBLEM TO BE SOLVED: To provide a method by which the effect of an ion-assist method can be obtd. as large as possible with good reproducibility when each layer of a multilayered antireflection film is continuously formed by an electron beam(EB) vapor deposition method by using an ion-assist method on a film which is continuously travelling.

SOLUTION: At least two layers of films having different refractive indices are laminated on at least one surface of a plastic film which continuously travels by using a vapor deposition method by an electron beam heating method with ion-assist activating method with an ion gun in vacuum to form an antireflection film on a plastic film. In this method, each layer film is prevented from being exposed to an environment with lower vacuum degree than 10^{-2} Torr between succeeding processes.
